FeynArts

An Introduction to Mathematica Tools for HEP

13-16 June 2025

Carlos Quezada Calonge

Juan José Sanz Cillero

What is FeynArts (FA) ?

FeynArts is a Mathematica package for the generation and visualization of Feynman diagrams and amplitudes.

-Allows model files generated by the user in FeynRules (SM already implemented in FA).

-Diagrams at tree-level, one-loop level, etc.

-Restrictions on which fields are allowed in a diagram.

Preface

We count with three main tools to understand FeynArts, FeynCalc, FeynRules, etc:

1. User Guide provided by the creators. FA Guide: https://feynarts.de/FA3Guide.pdf
2. Command InputForm[X] in Mathematica. Shows how Mathematica understands the expression X.
3. Command ?X . Shows the definition of X.

Using InputForm

Typical amplitude for a Feynman diagram

```
hhtohhtreeamp2 = PickLevel[Particles][hhtohhtreeamp] // ToFA1Conventions
```

$$\text{FAFeynAmpList}\left(\text{Process} \to \begin{pmatrix} S(1) & p1 & FCGV(MH) & \{\} \\ S(1) & p2 & FCGV(MH) & \{\} \end{pmatrix} \to \begin{pmatrix} S(1) & k1 & FCGV(MH) & \{\} \\ S(1) & k2 & FCGV(MH) & \{\} \end{pmatrix}\right), \text{Model} \to \{SM\}, \text{GenericModel} \to \{\text{Lorentz}\}, \text{AmplitudeLevel} \to \{\text{Particles}\}, \text{ExcludeParticles} \to \{\}, \text{ExcludeFieldPoints} \to \{\}, \text{LastSelections} \to \{\}\Bigg)$$

$$\left(\text{FAFeynAmp}\left(\text{GraphName}(, T1, G1C1P1, N1), -\frac{3\,FCGV(EL)^2\,FCGV(MH)^2}{4\,FCGV(MW)^2\,FCGV(SW)^2}\right), \text{FAFeynAmp}\left(\text{GraphName}(, T2, G1C2P1, N2), -\frac{9\,FCGV(EL)^2\,FCGV(MH)^4\,\frac{1}{(k1+k2)^2-FCGV(MH)^2}}{4\,FCGV(MW)^2\,FCGV(SW)^2}\right),\right.$$

$$\left.\text{FAFeynAmp}\left(\text{GraphName}(, T3, G1C3P1, N3), -\frac{9\,FCGV(EL)^2\,FCGV(MH)^4\,\frac{1}{(k2-p2)^2-FCGV(MH)^2}}{4\,FCGV(MW)^2\,FCGV(SW)^2}\right), \text{FAFeynAmp}\left(\text{GraphName}(, T4, G1C4P1, N4), -\frac{9\,FCGV(EL)^2\,FCGV(MH)^4\,\frac{1}{(k1-p2)^2-FCGV(MH)^2}}{4\,FCGV(MW)^2\,FCGV(SW)^2}\right)\right)$$

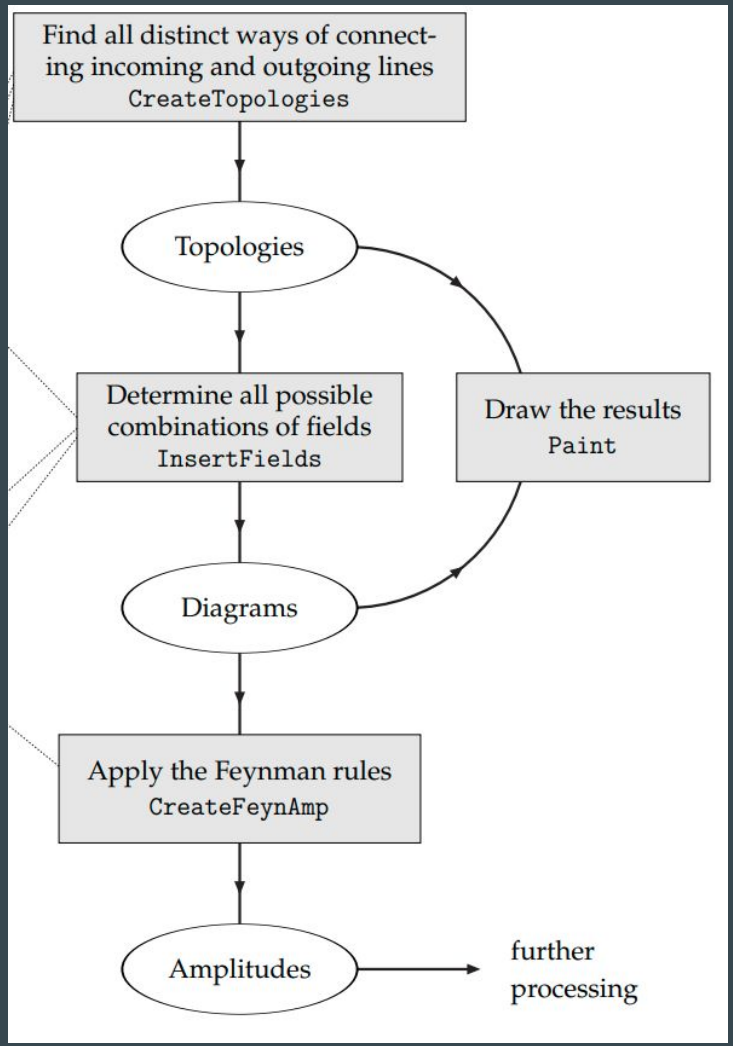
```
InputForm[hhtohhtreeamp2]
```

forma de entrada

```
//InputForm=
FAFeynAmpList[Process -> {{S[1], p1, FCGV["MH"], {}}, {S[1], p2, FCGV["MH"], {}}} -> {{S[1], k1, FCGV["MH"], {}}, {S[1], k2, FCGV["MH"], {}}}, Model -> {"SM"}, GenericModel -> {"Lorentz"},
  AmplitudeLevel -> {Particles}, ExcludeParticles -> {}, ExcludeFieldPoints -> {}, LastSelections -> {}][FAFeynAmp[GraphName["", "T1", "G1C1P1", "N1"],
  (-3*FCGV["EL"]^2*FCGV["MH"]^2)/(4*FCGV["MW"]^2*FCGV["SW"]^2)], FAFeynAmp[GraphName["", "T2", "G1C2P1", "N2"], (-9*FAPropagatorDenominator[k1 + k2, FCGV["MH"]]*FCGV["EL"]^2*FCGV["MH"]^4)/
  (4*FCGV["MW"]^2*FCGV["SW"]^2)], FAFeynAmp[GraphName["", "T3", "G1C3P1", "N3"], (-9*FAPropagatorDenominator[k2 - p2, FCGV["MH"]]*FCGV["EL"]^2*FCGV["MH"]^4)/(4*FCGV["MW"]^2*FCGV["SW"]^2)],
 FAFeynAmp[GraphName["", "T4", "G1C4P1", "N4"], (-9*FAPropagatorDenominator[k1 - p2, FCGV["MH"]]*FCGV["EL"]^2*FCGV["MH"]^4)/(4*FCGV["MW"]^2*FCGV["SW"]^2)]]
```

This allows us to write substitutions /. FCGV[“MH”] -> MH

How does it work?



Getting started: Creating Topologies

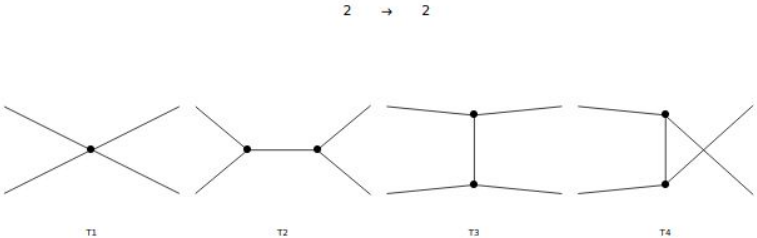
`CreateTopologies[`l`, `i` -> `o`]`	create topologies with l loops, i incoming, and o outgoing legs
`CreateTopologies[`l`, `e`]`	create topologies with l loops and e external legs

```
t22 = CreateTopologies[0, 2 → 2]
```

TopologyList(Topology(1)(Propagator(Incoming)(Vertex(1)(1), Vertex(4)(5)), Propagator(Incoming)(Vertex(1)(2), Vertex(4)(5)), Propagator(Outgoing)(Vertex(1)(3), Vertex(4)(5)), Propagator(Outgoing)(Vertex(1)(4), Vertex(4)(5))),
Topology(1)(Propagator(Incoming)(Vertex(1)(1), Vertex(3)(5)), Propagator(Incoming)(Vertex(1)(2), Vertex(3)(5)), Propagator(Outgoing)(Vertex(1)(3), Vertex(3)(6)), Propagator(Outgoing)(Vertex(1)(4), Vertex(3)(6)), Propagator(Internal)(Vertex(3)(5), Vertex(3)(6))),
Topology(1)(Propagator(Incoming)(Vertex(1)(1), Vertex(3)(5)), Propagator(Incoming)(Vertex(1)(2), Vertex(3)(6)), Propagator(Outgoing)(Vertex(1)(3), Vertex(3)(5)), Propagator(Outgoing)(Vertex(1)(4), Vertex(3)(6)), Propagator(Internal)(Vertex(3)(5), Vertex(3)(6))),
Topology(1)(Propagator(Incoming)(Vertex(1)(1), Vertex(3)(5)), Propagator(Incoming)(Vertex(1)(2), Vertex(3)(6)), Propagator(Outgoing)(Vertex(1)(3), Vertex(3)(6)), Propagator(Outgoing)(Vertex(1)(4), Vertex(3)(5)), Propagator(Internal)(Vertex(3)(5), Vertex(3)(6))))

```
Paint[t22, ColumnsXRows → 4]
```

> Top. 1 aebe/cede/0.m, 0 diagrams
> Top. 2 aebe/cfdf/ef .m, 0 diagrams
> Top. 3 aebf/cedf/ef .m, 0 diagrams
> Top. 4 aebf/cfde/ef .m, 0 diagrams



At this level there are not particles.
Only topologies

Inserting fields in the topologies

We can insert, for example, a general scalar, a class of scalars, and a particular scalar

`Generic, Classes, Particles`	field levels in *FeynArts*

`F, S, V, U, T`	basic field types: fermion, scalar, vector, ghost, and tensor fields
`Mix[`g_1`,` g_2`]`	g_1–g_2 mixing field

General variables for fields

`InsertFields[`t`, {`$i_1, i_2, \ldots$`} -> {`$o_1, o_2, \ldots$`}]`

insert fields into the `TopologyList` t where the incoming fields are $i_1, i_2, \ldots$ and the outgoing fields are $o_1, o_2, \ldots$

-Minimum information to define a Feynman Diagram. Incoming and outgoing particles.

-If a model is not specific, FeynArts uses the SM.mod.

Fields of the SM model file (SM.mod)

-The field content is specific to each model file.

class	*self-conj.*	*indices*	*members*		*mass*

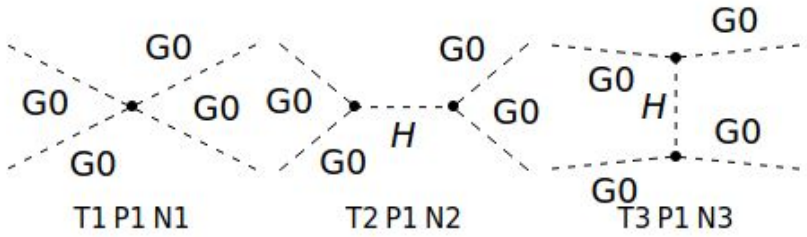
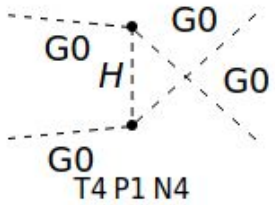
G0G0 → G0G0





Creating a Feynman amplitude

`CreateFeynAmp[`*i*`]`	translate the inserted topologies *i* into Feynman amplitudes

option	*default value*	
`AmplitudeLevel`	`InsertionLevel`	level specification (see end of Sect. 4.1)
`PreFactor`	`-I (2 Pi)^ (-4 LoopNumber)`	overall factor of the amplitude
`Truncated`	`False`	whether to remove external wave functions
`GaugeRules`	`_GaugeXi -> 1`	rules to enforce a particular choice of gauge
`MomentumConservation`	`True`	whether to enforce momentum conservation at each vertex
`GraphInfoFunction`	`(1 &)`	a function for adding graph information to the amplitude

```
omegaomegatoomegaomegaamp = CreateFeynAmp[omegaomegatoomegaomega, AmplitudeLevel → Particles, GaugeRules → {}]  /. M$FACouplingsHEFT
```

```
omegaomegatoomegaomegaamp = CreateFeynAmp[omegaomegatoomegaomega, AmplitudeLevel → Particles, GaugeRules → {}]  /. M$FACouplingsHEFT

$$\text{FAFeynAmpList}\left(\text{Process} \to \begin{pmatrix} S(3) & \text{p1} & \text{Mz} & \{\} \\ S(3) & \text{p2} & \text{Mz} & \{\} \end{pmatrix} \to \begin{pmatrix} S(3) & \text{k1} & \text{Mz} & \{\} \\ S(3) & \text{k2} & \text{Mz} & \{\} \end{pmatrix}\right), \text{Model} \to \{\text{HEFT3\_FA}\}, \text{GenericModel} \to \{\text{HEFT3\_FA}\},$$

$$\text{AmplitudeLevel} \to \{\text{Particles}\}, \text{ExcludeParticles} \to \{\}, \text{ExcludeFieldPoints} \to \{\}, \text{LastSelections} \to \{\}\Bigg(\text{FAFeynAmp}\Big(\text{GraphName}(, \text{T1}, \text{G1C1P1}, \text{N1}),$$

$$-i\left(\frac{8\,i\,(\text{a4}+\text{a5})\,(-\text{k1}).(-\text{k2})\,\text{p1}.\text{p2}}{v^4} + \frac{8\,i\,(\text{a4}+\text{a5})\,(-\text{k1}).\text{p2}\,(-\text{k2}).\text{p1}}{v^4} + \frac{8\,i\,(\text{a4}+\text{a5})\,(-\text{k1}).\text{p1}\,(-\text{k2}).\text{p2}}{v^4} - \frac{2\,i\,(-\text{k1}).(-\text{k2})}{v^2} - \frac{2\,i\,(-\text{k1}).\text{p1}}{v^2} - \frac{2\,i\,(-\text{k1}).\text{p2}}{v^2} - \frac{2\,i\,(-\text{k2}).\text{p1}}{v^2} - \frac{2\,i\,(-\text{k2}).\text{p2}}{v^2} - \frac{2\,i\,\text{p1}.\text{p2}}{v^2}\right)\Big),$$

$$\text{FAFeynAmp}\left(\text{GraphName}(, \text{T2}, \text{G1C2P1}, \text{N2}), -\frac{4\,a^2\,(-\text{k1}).(-\text{k2})\,\text{p1}.\text{p2}\,\frac{1}{(\text{k1}+\text{k2})^2-\text{FCGV(MH)}^2\,(\text{xiSubscript[}S(4)\text{]})}}{v^2}\right), \text{FAFeynAmp}\Big(\text{GraphName}(, \text{T3}, \text{G1C3P1}, \text{N3}),$$

$$-\frac{4\,a^2\,(-\text{k1}).\text{p1}\,(-\text{k2}).\text{p2}\,\frac{1}{(\text{k2}-\text{p2})^2-\text{FCGV(MH)}^2\,(\text{xiSubscript[}S(4)\text{]})}}{v^2}\Bigg), \text{FAFeynAmp}\left(\text{GraphName}(, \text{T4}, \text{G1C4P1}, \text{N4}), -\frac{4\,a^2\,(-\text{k1}).\text{p2}\,(-\text{k2}).\text{p1}\,\frac{1}{(\text{k1}-\text{p2})^2-\text{FCGV(MH)}^2\,(\text{xiSubscript[}S(4)\text{]})}}{v^2}\right)\Bigg)$$

One-loop

```
t11loop = CreateTopologies[1, 1 → 1]
```

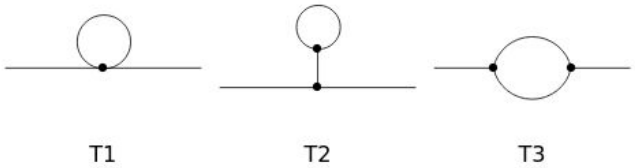
```
Paint[t11loop, ColumnsXRows → 3]
```

> Top. 1 ac/bc/cc.m, 0 diagrams

> Top. 2 ac/bc/cddd.m, 0 diagrams

> Top. 3 ac/bd/cdcd.m, 0 diagrams

$1 \rightarrow 1$



Higgs self-energy

```
hhselfenergy = InsertFields[t1loop, {S[1]} → {S[1]}, InsertionLevel → Particles]
```

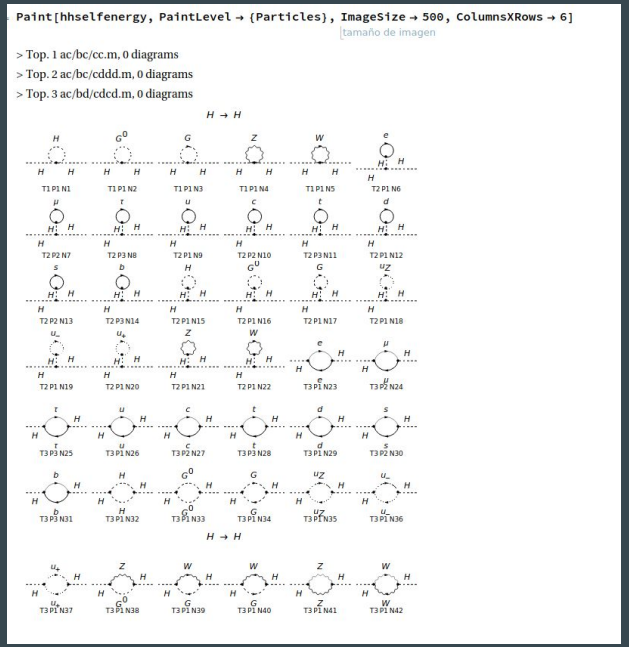
```
Paint[hhselfenergy, PaintLevel → {Particles}, ImageSize → 500, ColumnsXRows → 6]
```

[tamaño de imagen]

> Top. 1 ac/bc/cc.m, 0 diagrams

> Top. 2 ac/bc/cddd.m, 0 diagrams

> Top. 3 ac/bd/cdcd.m, 0 diagrams



Imposing restrictions

-We will only allow Higgs bosons in the loop

```
hhselfenergy2 = InsertFields[t1loop, {S[1]} → {S[1]}, InsertionLevel → Particles, ExcludeParticles → {V, F, S[2], S[3], U}, LastSelections → {S[1]}]
```

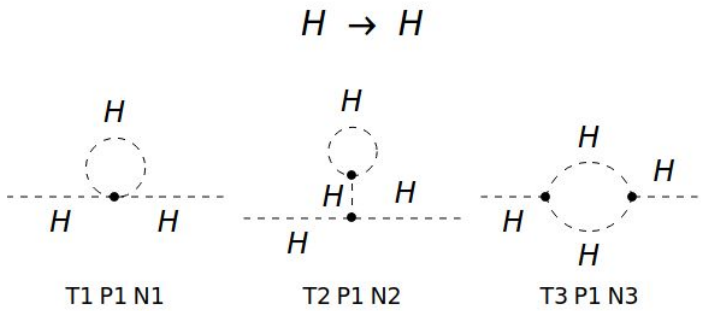
```
Paint[hhselfenergy2, PaintLevel → {Particles}, ImageSize → 500]
```

tamaño de imagen

> Top. 1 ac/bc/cc.m, 0 diagrams

> Top. 2 ac/bc/cddd.m, 0 diagrams

> Top. 3 ac/bd/cdcd.m, 0 diagrams



Then again we can create the amplitude of this

```
hhselfenergy2amp = CreateFeynAmp[hhselfenergy2, AmplitudeLevel → Particles, GaugeRules → {}]
```

```
hhselfenergy2ampnew = PickLevel[Particles][hhselfenergy2amp] // ToFA1Conventions
```

That is the expression that we can feed to FeynCalc.

Hands on!

Exercise 1:

- Create a topology 2-> 2 in the SM
- Insert the fields for the process hh-> hh
- Draw the diagrams for this process. How many diagrams do we have?

Exercise 2:

- Create a topology 2-> 2 in the SM
- Insert the fields for the process WW-> hh
- Draw the diagrams for this process. How many diagrams?

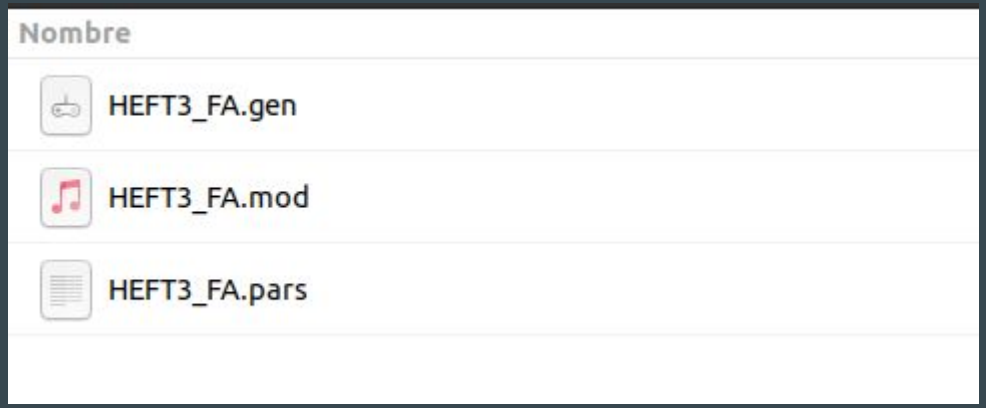
- Now remove vector fields from the intermediate fields
- Draw the diagrams for this process again. How many diagrams do we have now?

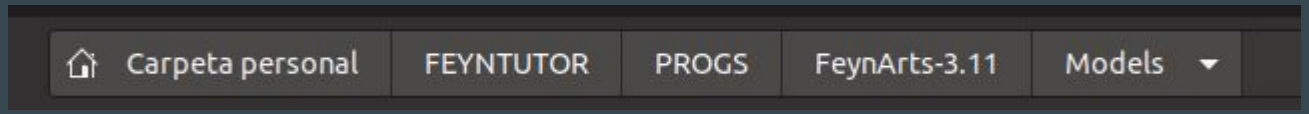
Exercise 3:

- Create a topology 1-> 1 at one loop in the SM.
- Insert the fields for the process h-> h
- Draw the diagrams for this process. How many diagrams?

- Now remove vector, ghosts and fermions and only allow the Higgs in the loop
- Draw the diagrams for this process again. How many diagrams do we have now?

EXTRA: HEFT model





Exercise 4 (extra):

- Create a topology 2-> 2 in HEFT
- Insert the fields for the process G0G0 -> G0G0
- Draw the diagrams for this process. How many diagrams?
